

Mid. level Web/Backend Developer

Building software solution is a visionary process of taking 1 small step forward to make the World better and easier place.

If you also believe that the more challenging is something the greater personal satisfaction; if you are eager to change because there is no meaning in status quo; if you are brave to transform yourself... Then we would be happy to join you and create together meaningful journey.

We are growing our software team with Mid-level Web/Backend developer, eager to expand his/her limits and participate in the creation of something that will make significant industry change.

Main responsibilities include:

- Analyze business requirements from a variety of sources and assimilate and interpret into written technical specification documents;
- Perform coding to written technical specifications;
- Also responsible for creating/updating internal standards and design guidelines;
- Create, document, and implement unit test plans, scripts, and test harnesses;
- Assist in the implementation of other automated test frameworks;
- Keep informed of business priorities and make decisions based on the shared business goals of the organization;
- Proactively perform other related duties as and when required;
- Reliably report regarding assignments status, obstacles and problems;
- Ability to autonomously use creativity to develop elegant and exciting solutions to real-life problems.

Core skills required:

- Minimum 2 years of experience programming in Django (we are open to review applications with different language background);
- Have experience with Git and/or other distributed revision control systems;
- Robust personality;
- Ability to work independent in a dynamic environment, flexibility;
- Strong analytic view combined with pragmatic attitude;
- Open communication attitude: active listening and giving feedback;
- Excellent control in English language.

You will impress us if you have knowledge and/or experience in:

- Building cross-platform desktop applications;
- Unit testing and continuous integration;
- Amazon Web Services;

With us you will benefit from:

- A culture that values learning and mastery;
- Bright co-workers in a nice and stimulating environment;
- Working in an agile and fast-paced company;
- Autonomy and some flexibility in working time to fit your lifestyle and optimal work conditions;
- Knowing that your works truly helps to make peoples' lives better.

We would like to meet you and find out more of what makes you happy and what ignites you.
